

Amateur radio is alive and well at Collins Aerospace. Our base of operations (a modern receiver / transmitter facility with callsign N5CXX) is on the Collins Richardson campus and is dedicated for use by all licensed members.

Join us for fellowship, discussion and presentations on topics of interest to our members. Our meeting dates, times, location and program topics are shown on our Club website - n5cxx.us

The Collins Amateur Radio Club Is Seeking New Members

The Collins Amateur Radio Club (CARC) has been a stable group for over 30 years, residing on the Richardson campus of the Collins Radio / Rockwell Collins / Collins Aerospace corporate organization.

Our purpose is to further the following goals:

- Offer a focal point for Collins employees, retirees and others to advance their education and skills in amateur radio communications
- Develop interest in amateur radio through work with other organizations both within and external to the

corporation

- Provide modern amateur radio communications facilities for use by CARC members
- Provide emergency communications as needed for the surrounding community
- Maintain radio relay capability to further the integration of broad communications capabilities locally and around the world
- Advance the state of the art through the exchange of information provided by the varied expertise of members
- Conduct club programs and activities to advance a general interest in amateur radio within the company and the community

While our club membership consists primarily of Collins employees and retirees, we offer associate memberships for others in the area, as well as memberships for interested dependents of members.

We invite you to join us ... Here's a link to our Membership Application: [https://www.n5cxx.us/Club Membership Form.pdf](https://www.n5cxx.us/Club%20Membership%20Form.pdf)

Club meetings are held just down the street from Collins Aerospace at Woodcreek Church, 3400 E. Renner Rd., Richardson. Meetings begin at 530 p.m. to allow employee members to attend meetings without the back-and-forth of going home and coming back.

To make things interesting, we have adopted a calendar-quarterly schema which features a formal technical program the first month, followed by a Workshop/Mentoring Night/Show & Tell session in the second month. The third month is dedicated to a family social--dinner at a local restaurant, our annual Ice Cream Social or our Christmas Party.
